Altus Project No. 5395**

Dear Mr. Brown,

Pursuant to comments received from Chris DiMatteo at Longmeadow Planning, we have prepared this memorandum regarding stormwater on the subject site.

Given that the plan consists of a small building addition in an area that is currently pavement, no new impervious surfaces are proposed. This will result in no addition stormwater runoff and cause no detrimental effect to the existing drainage system. Furthermore, as roof runoff is generally regarded to be cleaner than paved parking areas, this plan will likely result in a marginal improvement in stormwater quality. As such, the new addition will not alter the site's conformity with the Town of York's stormwater regulations given that the previous site plan included a drainage system designed, approved and constructed in accordance with them.

Please call me if you have any questions or need any additional information.

Sincerely,

ALTUS ENGINEERING
